Lytle named Chief Information Officer for Goodwill Industries of Central Indiana, Inc.

Jay C. Lytle today joins Goodwill Industries of Central Indiana, Inc., to lead the organization's technology solutions department as vice president and chief information officer (CIO).

"We are pleased to have Jay joining our team," said Goodwill President and CEO Kent Kramer. "His success in creating innovative solutions for technology challenges coupled with his vast knowledge of the industry ensures that Jay will lead Goodwill wisely into the future as information technology continues to advance."

Lytle brings more than 16 years of experience to his role, most recently serving as CIO for six years at the Indiana Department of Transportation (INDOT). As CIO, Lytle developed and implemented multiple strategic initiatives to align IT solutions with business efforts and improve customer service. Lytle also held the position of director of applications development, in which he managed a multimillion dollar budget, restructured the department to better suit customer needs, and established design and development standards.

Previously, Lytle served multiple roles within the Indiana Department of Revenue, including as applications development manager and project manager for web services. In addition, he worked for Accenture as a systems analyst.

"I am eager to learn more and identify ways in which technology can better deliver the critical data and information that Goodwill and its leaders need to advance our mission and provide a competitive advantage to our business," said Lytle.

A two-time graduate of Indiana University's Kelley School of Business, Lytle earned his bachelor's degree in computer information systems and a Master of Business Administration. Lytle currently resides in Fishers, Indiana, with his wife, Nedra, and their two children.
